Walgreens + PRIME

Specialty medication

Specialty medications are used to treat chronic, complex or rare conditions. They're different because they:

- May be given by injection (with a needle) or by mouth (pills)
- Cost more than other medicines
- Need special storage or care
- Have to be taken on a strict schedule

We care about what you're going through and are ready to help you manage your condition and specialty medicines with personalized support 24/7.

Insurance and financial coordination

Our expert specialists coordinate with your doctor and health plan coverage. We help with prior approvals and conduct a review of your benefits.

Ongoing support

We offer customized programs to help you manage your condition. Our experienced, specially trained pharmacists and care coordinators understand your condition and are available to offer one-on-one support.

Your support begins with a phone call to assess your individual needs. After that, the Care Team calls you regularly—and confidentially—to provide you with valuable information to help you stay on track with your therapy, including:

- Coordinating injection training
- Helping you to manage any medication side effects
- Monitoring your symptoms and response to your medication
- Working closely with your doctor to monitor your progress
- Assisting when you need a new prescription or refill
- Setting up reliable, on-time medication delivery
